

Repository Analysis Report

for **canalytics**

- Repository Name: [canalytics](#)
- Owner: [ITMO-Canalytics](#)
- Created at: 29.05.2025 06:47

Statistics	Values
Stars Count	1
Forks Count	0
Issues Count	0

Metric	Values
README Presence	✓
License Presence	X
Documentation Presence	X
Examples Presence	✓
Requirements Presence	✓
Tests Presence	X
Description Presence	✓

Repository Structure:

- Compliance: The repository follows a logical layout for a data engineering project, separating collectors, pipeline (Airflow DAGs), storage utilities, analysis scripts, and data directories. However, it lacks several conventional top-level artifacts such as a LICENSE file, a CONTRIBUTING guide, and a dedicated tests folder, which are expected for open-source projects.
- Missing files: LICENSE, CONTRIBUTING.md, tests/ directory, docs/ directory
- Organization: Directories are well-named and grouped by responsibility (collectors, pipeline, storage, analysis, data, report). The README clearly documents this structure, making navigation straightforward for new contributors.

README Analysis:

- Quality: The README is comprehensive: it provides project overview, architecture diagram, detailed directory tree, setup instructions, usage steps, environment variable list, and team responsibilities. Formatting is clear, but it lacks visual badges and a link to contribution guidelines.
- Project description: Yes
- Installation: Yes
- Usage examples: Yes
- Contribution guidelines: No
- License specified: No
- Badges present: No

Documentation:

- Tests present: No
- Documentation quality: Aside from the README and a markdown report, there is no dedicated documentation folder or generated API docs. The existing documentation is sufficient for basic usage but could be expanded with more detailed developer guides and data schema descriptions.
- Outdated content: No

Key Shortcomings:

- Missing LICENSE file despite reference in README
- No test suite or tests directory
- Absence of contribution guidelines (CONTRIBUTING.md)
- No badges for build/status/license
- Lack of dedicated documentation beyond README and report

Recommendations:

- Add a proper LICENSE file (e.g., MIT) to match the README claim.
- Create a tests/ directory with unit/integration tests for collectors, storage loaders, and ETL scripts.
- Add a CONTRIBUTING.md file and include contribution guidelines, code style, and pull request process.
